Re: 100mg oral winstrol for 8 weeks? You should see great results on 100mg's ed. You may want to split it up IM and oral, Winny gives me some terrible indigestion/heartburn when take orally. Also if your joints start to give you problems, cut the dosage down or quit early. Winstrol is a prescription medicine used as a prophylactic to prevent the symptoms of hereditary angioedema and severity of attacks of angioedema. Winstrol may be used alone or with other medications. Winstrol belongs to a class of drugs called Anabolic Steroids, Schedule III. It is not known if Winstrol is safe and effective in children. Winstrol is most commonly dosed at 50 mg/day and occasionally used as high as 100 mg/day. I only used 100 mg/day of it the last 2 weeks before a competition once, but used 50 mg/day the first 4 weeks of it. I've found that steroid cycles with Winstrol need to be no longer than 6-8 weeks because it can

wreak havoc on your cholesterol levels. Dosages of 50 -100mg per day are common for the injectable form. Wrestlers and boxers may decrease their dosages depending on their body fat level. When using the injectable form, Winstrol doses will never usually rise above the 400mg weekly range. This range will also apply to the oral form of Winstrol which equates to 60mg daily. It's not uncommon for them to take doses of 50-100 mg per day, regardless of whether oral or injectable Winstrol is being used. At these high doses, it's no surprise that bodybuilders are much more likely to suffer unsavory consequences. The benefits of Winstrol <https://sway.office.com/zgHD0cm4HRNKpDtz>
