- › Then go for PCT(Post Cycle Therapy).

Description Clomid Promifen by Alpha-Pharma 50 Tab 50 mg. Clomid is one of the two principal SERMs (selective estrogen receptor modulators) used for enhanced recovery of testosterone production after anabolic steroid cycles.. Many androgens, and especially the strongest ones such as Oxymetholone, cause a fall in testosterone natural production in the body during the duration of the steroid cycle. Application and dosage of Promifen. The duration of Clomid administration is 7-10 days, the maximum is 2 weeks. To use Promifen as a preparation of post-course therapy (PCT), athletes usually start 7-10 days after taking anabolic drugs. The recommended dose is 50-100 mg per day (this is 1-2 tablets).
