Magnesium testing may be ordered as a follow up to chronically low blood levels of calcium and potassium. It also may be ordered when a person has symptoms that may be due to a magnesium deficiency, such as muscle weakness, twitching, cramping, confusion, cardiac arrhythmias, and seizures. From the Editor-in-Chief. Welcome to GPnotebook - a concise synopsis of clinical medicine focused on the needs of the general practitioner, which aims to help you make fast, evidence-based decisions. GPnotebook's content database was originally started while the core authors were medical students in the 1990s, and it became a reflection of.

Search the world's information, including webpages, images, videos and more. Google has many special features to help you find exactly what you're looking for.

The initial dosage required will usually be 120-160 mg daily for 2-3 weeks. Subsequent dosage (40-120 mg daily in divided doses with morning and evening meal) should be based on the clinical effect obtained during the first weeks of therapy. To ensure absorption, capsules must be taken with a normal meal, if necessary with a little [discover this](#)
