Other Name: Polyethylene Glycol Recombinant Human Somatropin Injection Biological: PEG-rhGH high dose PEG-rhGH Injection 0.2 mg/kg/w by subcutaneous injection for 52 weeks. Polyethylene glycol recombinant human somatropin was approved by China Food and Drug Administration (CFDA) on January 6, 2014. It was developed and marketed as Jintrolong® by GeneScience Pharmaceuticals.. Jintrolong® is a pegylated recombinant human growth hormone, which has direct tissue and metabolic effects, including stimulation of chondrocyte differentiation, stimulation of lipolysis.

Drug: PEG-somatropin After the first stage (52 weeks) of Phase II clinical trial, the initial medication dose of this extension period is 0.2 mg/kg weight/week of PEG-rhGH for high dose group, low dose group and negative control group, and it is adjusted in accordance with yearly height velocity (HV) and IGF-1 SDS of each visit.

Arm Group Label: PEG-somatropin Other Name: Polyethylene Glycol Recombinant Human Somatropin

Injection Eligibility: Criteria: Inclusion Criteria: - All subjects who have completed the first stage (52 weeks) of Phase II clinical trial (including negative controls) with completed follow-up records may be enrolled in the extension period study. [look at these guys](#)

Human Growth hormone (Recombinant) (or somatropin recombinant) injection 4IU/ Vial((1mg H.G.H \equiv 3 unit) 1 ML VIAL. 06-C00-011.. Recombinant human erythropoietin (alfa rh-Epo) 4000IU/0.4ml solution for injection in PreFilled Syringe (solution without human serum albumine,HAS Free) for injection. Methoxy polyethylene glycol-epoetin β . Recombinant human bone morphogenetic protein² Superoxide dismutase, salmon calcitonin, insulin Gene delivery Plasmid DNA Protein therapeutics Analog of glucagon peptide¹ Drugs to treat alcohol dependence Naltrexone . Schizophrenia drugs Aripiprazole, olanzapine Immunosuppressive drugs Rapamycin Hormone therapy Human somatropin

Description: PEG-rhGH Injection 0.1 mg/kg/w by subcutaneous injection for 52 weeks. Other Name: Polyethylene Glycol Recombinant Human Somatropin Injection
Intervention Type: Biological Intervention Name: PEG-rhGH high dose. Description: PEG-rhGH Injection 0.2 mg/kg/w by subcutaneous injection for 52 weeks. The effect of polyethylene glycol recombinant human growth hormone on growth and glucose metabolism in hypophysectomized rats. A limitation of current rhGH treatments is the fact that it must be administered by daily injection because of its short circulating half-life.. PEGylation of somatropin (recombinant human growth hormone): impact.

To study the effect of polyethylene glycol recombinant human growth hormone on growth and glucose metabolism in hypophysectomized rats, and compare th... [navigate to this website](#)
