Oral Turinabol is somewhat of a unique anabolic steroid. Specifically, Oral Turinabol is a cross between Methandrostrenolone and Clostebol. This provides a steroid with powerful anabolic action while at the same time minimizing androgenic characteristics. Oral Turinabol also carries somewhat of an interesting history behind it.

Turinabol is arguably the best steroid for weight loss (fat loss), if users are planning on incorporating regular cardio into their training split. This is because it is among the best AAS for muscular endurance, thus cardiovascular performance will vastly improve due to a notable increase in red blood cell production.

Turinabol is a steroid that can be used for

multiple purposes and the user is best advised to develop an understanding of how this steroid works, so you're in a position to include it in a cycle to the greatest effect. Below are the main benefits and effects that Tbol can deliver: Performance Enhancement Turinabol was the chosen anabolic by the German doping machine for two reasons. It does not produce a lot of muscle mass. Athletes who are very lean and muscular to begin with were able to gain 8-10 lbs. of lean muscle at best since they would run it solo and not with Testosterone to avoid detection. That's a reasonable amount of muscle for an international athlete to gain during peak.

When using this product as part of a cycle, your dosage is going to vary compared to using it in isolation. You'll find that cycle doses are smaller, whereas isolated doses are slightly larger.. When taking turinabol as part of a cycle, a dose of 20-50mg per day for males, and 2.5 - 7.5mg per day for females, will suffice. Some believe that they need to administer their tbol in the same.
