Dianabol or Anadrol For Strength With an anabolic ratio of about 320% from Testosterone, Anadrol is a better option for pure strength gains. Dianabol will give you some as well, but it's just 210% as potent as Testosterone on the anabolic side. There's a study that shows strength gains even in guys on Hemodialysis with Anadrol. Anadrol is a more potent version than Dbol as it would offer a little bit better results but due to it being more powerful, it would also offer more severe side effects too. Anadrol is more powerful than Dianabol and this is the reason why Abomb (or A50 or any other Oxymetholone compounds) are recommended only for experienced steroid users. In truth, when it comes to Anadrol vs

Dbol we can't say for certain which of the two is best, because it all depends on you and your goals. For example, if you're a female bodybuilder, Anadrol is obviously the best because women are advised not to use Dianabol at all. Anadrol's effects are usually considered as stronger than those of Dbol, but its side effects are also worse. If you use this drug, you can see huge gains in a short amount of time, but you will commonly suffer from problems such as gyno, a swollen face and body, back pain, and even some serious health issues in the long run. Anadrol will generally produce slightly better results compared to dbol, with Anadrol being the more powerful steroid. However, Anadrol will also cause more severe side effects. As a result of its toxic nature, Anadrol's benefits vs risks ratio is considered less optimal than Dianabol; making dbol the more popular steroid out of the two.
